# Contents

1 Create basic node for Flow Chart(step-2):

1.1 Create Start/End section:

Start/End

1.2 Create Input/Output section:

Input/Output

1.3 Create Condition section:
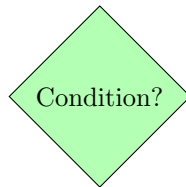

Condition?

1.4 Create connection section:

Connection
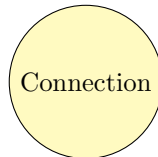

2 create linked two node:

Start

Input
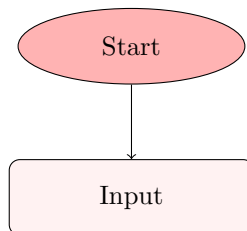

3 Practice of FlowChart:

3.1 Flow chart for adding two two number:

```
        ┌─────────────┐
        │    Start     │
        └──────┬──────┘
               │
        ┌──────▼──────┐
        │  Input two   │
        │  value a,b:  │
        └──────┬──────┘
               │
        ┌──────▼──────┐
        │   sum=a+b    │
        └──────┬──────┘
               │
        ┌──────▼──────┐
        │ Output: sum  │
        └──────┬──────┘
               │
        ┌──────▼──────┐
        │     End      │
        └─────────────┘
```
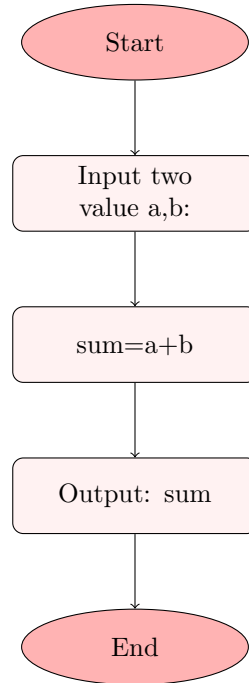

3.2 Flow chart with condition:

```
                    ┌─────────────┐
                    │    Start    │
                    └─────────────┘
                           │
                           ▼
                    ┌─────────────┐
                    │  Input two  │
                    │  value a,b: │
                    └─────────────┘
                           │
                           ▼
                         a>b?
```

Start

Input two value a,b:

a>b?

Largest number is:a

Largest number is b

c

End
